

# ● Peltier Heater & UV-Vis Detection Module

## Simplify PAT Solutions

Unlock a greater process analytical technology (PAT) potential with the Peltier Heater and UV-Vis Detection module. Now offered with our groundbreaking online sterile sampling and liquid handling solution, the ProSIAmplifier.

## Advantages:

- + LED light source increases bulb lifetime by over 40-fold relative to tungsten.
- + Peltier heating element allows for rapid heating and cooling in sample handling.

### Configure LEDs

*Choose between multiple wavelength options from 255nm to 980nm.*

### Customize Detection

*Select what type of spectrometer and light spectra to gather data from.*

### Peltier Heating Option

*Heat and cool samples dynamically in one space for ultimate sample handling capabilities.*
